

Shamrock Environmental Corporation Acquires FER Inc.

NOVEMBER 2022

[To our customers, vendors, and industry contacts,]

We are pleased to announce Shamrock Environmental Corporation (“Shamrock”) has acquired FER Waste Services (“FER” or the “Company”) located in Oklahoma City, OK. The acquisition of FER adds approximately 40 employees and a Centralized Wastewater Treatment (“CWT”) facility in Oklahoma City to Shamrock, extending Shamrock’s presence to the South-Central U.S.

Founded in 1995 by Keith and Cheryl Ferguson, FER is a leading provider of wastewater treatment and waste management services to over 1,500 customers in the Oklahoma region. Keith and Cheryl Ferguson will continue to lead FER under Shamrock ownership.

“We are extremely excited to join the Shamrock team,” said Keith Ferguson. “In selecting a partner for our business, our primary focus was on ensuring the future of our employees, maintaining our strong customer relationships, and finding alignment on the vision for FER. It was very clear early-on that Shamrock met all of these requirements.”

“We recognize the success of FER is a direct result of our most valuable resource: our employees,” added Cheryl Ferguson. “Shamrock shares that core value, and we look forward to this new beginning.”

“The FER team is a special group of hard-working, talented individuals who are dedicated to superior customer service, and we are proud to welcome them to the Shamrock family,” said Terry Healy, CEO of Shamrock. “We look forward to continuing to serve customers with our combined expertise and geographic reach.”

Shamrock is a leading provider of essential environmental services, including non-hazardous wastewater treatment, waste management, industrial services and environmental construction. Leveraging the company’s footprint of CWT facilities and fleet of tankers and vacuum trucks, Shamrock provides mission-critical wastewater treatment and related industrial services to customers in diverse end markets across the U.S.
